# ASSIGNMENT – 01
# PATIENT APPOINTMENT BOOKING FORM

**Name:** Nethra G
**Roll Number:** 240701358
**Department:** Computer Science and Engineering
**Subject:** Low-Code Development
**Platform:** Zoho Creator

## 1. AIM

To design and develop a functional Patient Appointment Booking Management application using Zoho Creator that demonstrates the correct usage of all thirteen Basic Fields available in the Form Builder while solving the real healthcare front-desk requirement of scheduling patient appointments in a structured manner.

## 2. OBJECTIVE

The objective of this experiment is to create a digital patient appointment booking form using Zoho Creator. The application captures the personal details, contact information, department preference, symptoms and medical history, preferred consultation schedule, and consent of patients in a structured and validated manner.

The application also demonstrates the use of forms, reports, field-level validation, and workflow automation in a low-code development environment.

## 3. PROBLEM STATEMENT

The front desk of a multi-specialty clinic receives appointment requests through phone calls and walk-ins, which leads to double-bookings, missed follow-ups, and no structured record of a patient's symptoms or medical history before the consultation. Doctors often have no visibility into a patient's condition until the patient arrives.

To overcome this problem, a low-code application is developed using Zoho Creator. The application allows a patient or front-desk staff member to submit an appointment request through a single online form.

The form captures personal identity, contact details, department preference, symptoms, existing conditions, preferred schedule, and consent for treatment using all thirteen Basic Field types provided by the Zoho Creator Form Builder.

## 4. SCOPE OF THE USE CASE

- Application Name: Patient Appointment & Scheduling Management
- Form Name: Appointment_Booking_Form
- Primary Users: Patients / Front-desk (Reception) staff

- Report View: Appointment_Booking_Report (list of all submitted appointment requests)
- Objective of the Report: Enable the front desk and doctors to filter, confirm, and schedule patient appointments

## 5. BASIC FIELDS USED

The application uses all thirteen Basic Fields specified in the assignment.

| S.No | Basic Field | Form Field Name | Purpose |
|---|---|---|---|
| 1 | Name | Patient_Name | Captures the full name of the patient |
| 2 | Email | Email_Address | Captures a validated email for appointment confirmation |
| 3 | Address | Residential_Address | Captures the patient's full residential address |
| 4 | Phone | Contact_Number | Captures a validated mobile number for the clinic to call |
| 5 | Single Line | Referred_By | Captures a short free-text entry for a referring doctor |
| 6 | Multi Line | Symptoms_Description | Captures free-text description of symptoms / reason for visit |
| 7 | Number | Age | Captures a numeric value with validation for the patient's age |
| 8 | Date | Preferred_Appointment_Date | Captures the preferred date of consultation |
| 9 | Time | Preferred_Appointment_Time | Captures the preferred time slot for consultation |
| 10 | Drop Down | Department | Presents a single-select list of hospital departments |
| 11 | Radio | Gender | Captures a single mandatory selection among exclusive options |
| 12 | Multi Select | Existing_Conditions | Allows selection of one or more pre-existing conditions/allergies |
| 13 | Checkbox | Consent_For_Treatment | Captures the patient's consent to examination and treatment |

These field mappings and their purposes follow the assignment specification.

## 6. FORM LAYOUT

The form was divided into four logical sections to organize the patient information clearly.

***Section A – Patient Details***

- Patient Name (First Name, Last Name)
- Age
- Gender

***Section B – Contact Details***

- Email Address
- Contact Number
- Residential Address

***Section C – Medical Details***

- Referred By
- Department
- Existing Conditions
- Symptoms Description

***Section D – Scheduling & Consent***

- Preferred Appointment Date
- Preferred Appointment Time
- Consent for Examination and Treatment

This four-section arrangement follows the layout specified in the assignment.

## 7. PROCEDURE

**Step 1: Creating the Zoho Creator Application**

A new application was created in Zoho Creator using the Blank Application option.

The application was named:

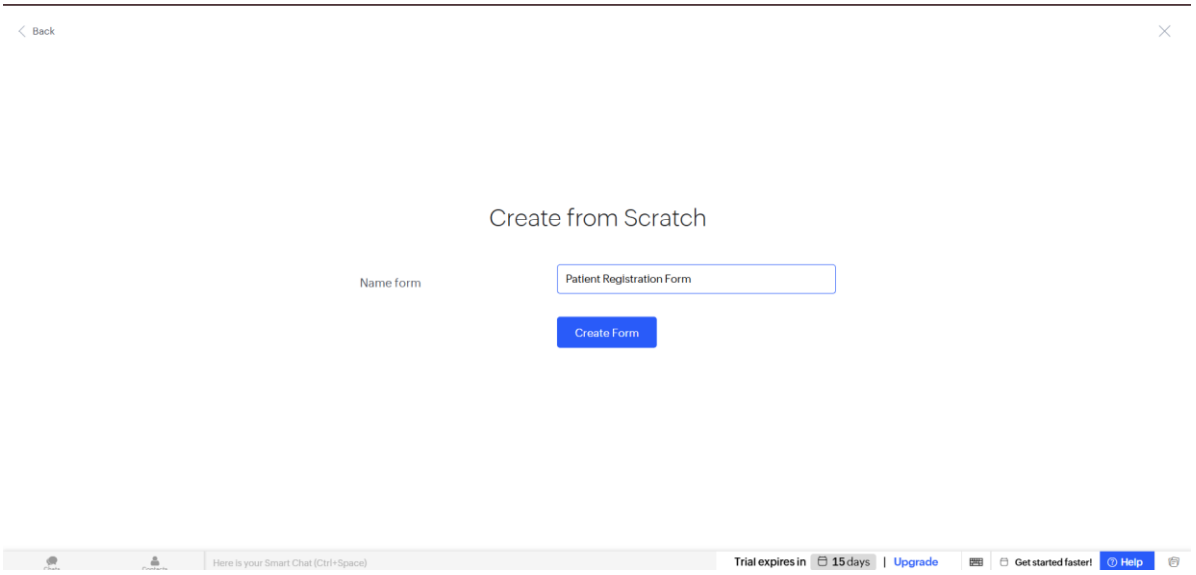

**Patient Appointment & Scheduling Management**

**Step 2: Creating the Appointment Booking Form**

A new form was created inside the application with the name:

**Appointment_Booking_Form**

The form was named through the Create from Scratch option, and was used to collect the personal, contact, medical, and scheduling information of patients.

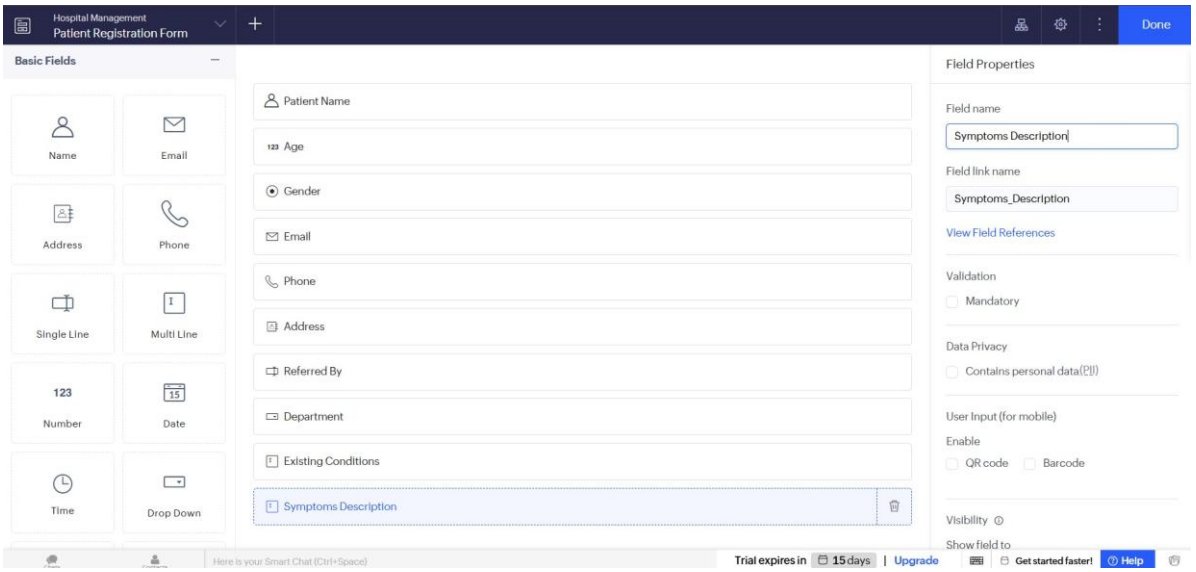

*Creating the Patient Registration Form from Scratch*

**Step 3: Adding the Basic Fields**

All thirteen Basic Fields specified in the assignment were added to the Appointment Booking Form.

The fields were configured according to their respective purposes, such as capturing names, email addresses, phone numbers, symptoms, department preferences, existing conditions, and consent.

*Form Builder showing the Basic Fields*

**Step 4: Creating Form Sections**

The form was organized into four sections:

- Patient Details
- Contact Details
- Medical Details
- Scheduling & Consent

This arrangement improves the readability and usability of the form.

## 8. FIELD VALIDATION

The following validation rules were configured in the form.

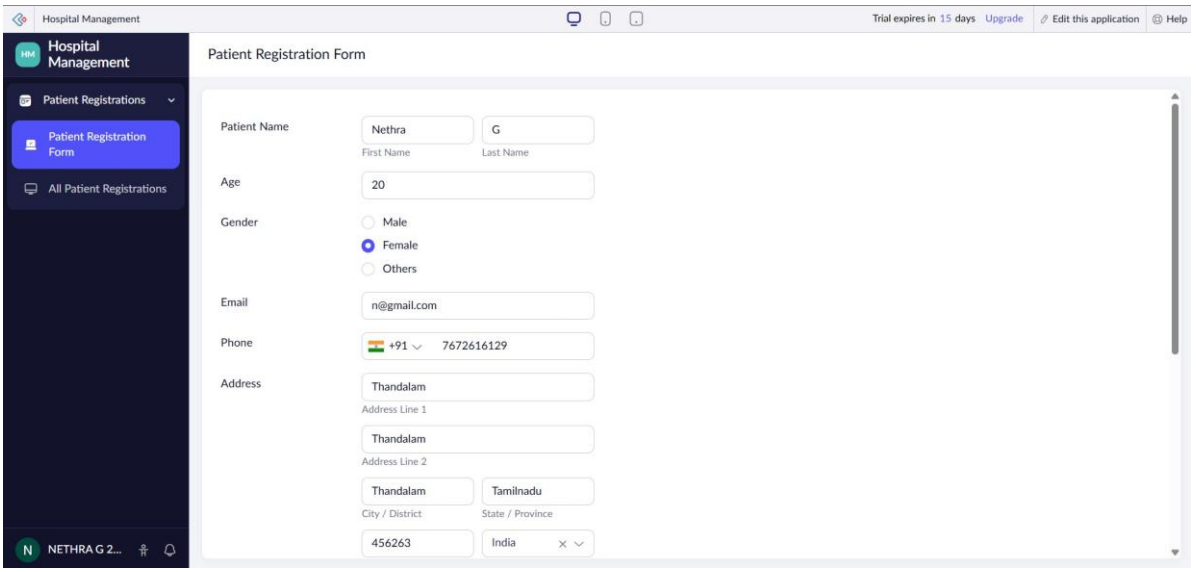

| Field | Validation |
|---|---|
| Patient Name | Mandatory |
| Age | Mandatory; value restricted from 0 to 120 |
| Gender | Mandatory |
| Email Address | Mandatory and valid email format |
| Contact Number | Mandatory and Indian phone number format |
| Department | Mandatory |
| Preferred Appointment Date | Mandatory; past dates are not allowed |
| Consent For Treatment | Mandatory; form cannot be submitted without consent |

The assignment specifically requires mandatory fields, email format validation, Indian phone format, age range validation, restriction of past dates, and mandatory consent.

## 9. LIVE PREVIEW OF THE FORM

After completing the form configuration, the form was opened using the Live Preview option.

The Live Preview was used to verify the appearance, arrangement, field inputs, and overall functionality of the Appointment Booking Form.

*Live Preview of the Patient Registration / Appointment Booking Form*

## 10. SUBMITTING SAMPLE RECORDS

Sample patient appointment requests were submitted through the completed form.

Sample records were entered with different personal, contact, and medical details. The submitted records were automatically stored in the corresponding Zoho Creator report.

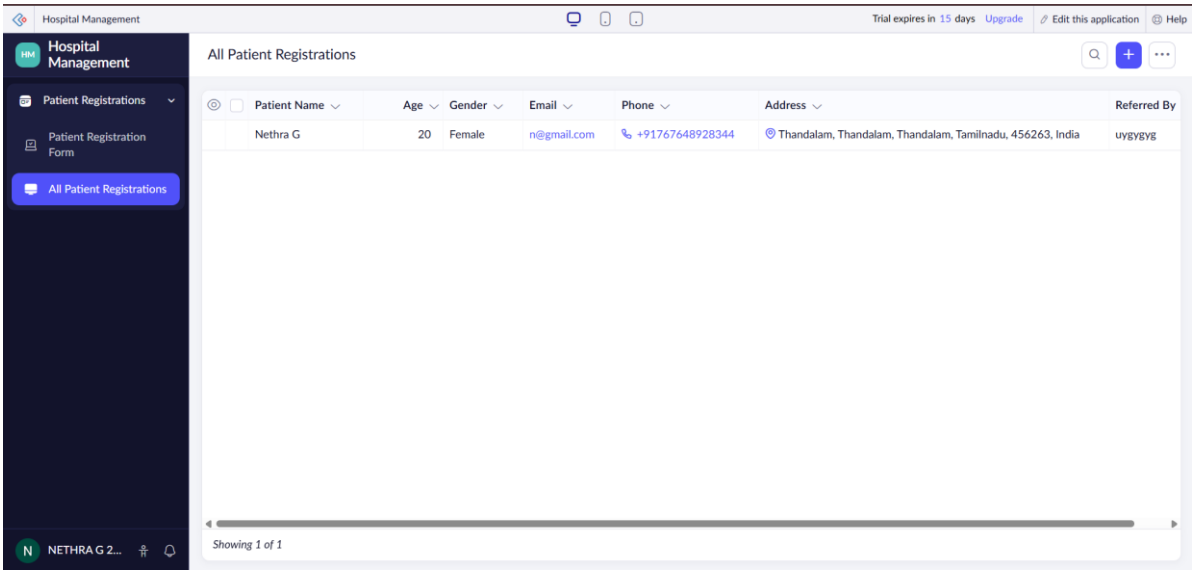

## 11. APPOINTMENT BOOKING REPORT

Zoho Creator automatically generated a report for the submitted form records.

The report was named:

**Appointment_Booking_Report**

The report allows the front desk and doctors to view, review, filter by Department and Preferred Appointment Date, and confirm the final slot for each patient.

*All Patient Appointment Registrations Report*

## 12. WORKFLOW AUTOMATION

A workflow was created to automate the confirmation process after a successful form submission.

The workflow was named:

**Appointment Confirmation Email**

The workflow is triggered when a new record is successfully created through the Appointment_Booking_Form.

The workflow sends a confirmation email to the email address provided by the patient.

The workflow follows the sequence:

**Form Submission → Successful Submission → Record Created → Confirmation Email**

The assignment specifies that an automated confirmation email should be triggered using the Email field value after successful submission.

## 13. TESTING

The application was tested by submitting sample patient appointment requests.

The following conditions were verified:

- Mandatory fields cannot be left empty.
- Email addresses are validated using the email format.
- Contact number accepts the required Indian phone format.
- Age accepts values between 0 and 120.
- Past dates are not accepted for Preferred Appointment Date.
- Gender must be selected.
- Department must be selected.
- Consent for Treatment is required before submission.

- Successfully submitted records appear in the Appointment_Booking_Report.
- The confirmation email workflow is triggered after successful submission.

## 14. WORKFLOW OF THE APPLICATION

The overall workflow of the application is:

Patient opens the Appointment Booking Form
↓
Patient enters personal details
↓
Patient enters contact details
↓
Patient enters medical details
↓
Patient selects preferred appointment date and time
↓
Patient agrees to Consent for Treatment
↓
Submit Form
↓
Zoho Creator validates data
↓
Record is created
↓
Record appears in the Report
↓
Confirmation Email is sent
↓
Front desk reviews and confirms the appointment slot with the concerned doctor

This workflow is based on the workflow summary provided in the assignment.

## 15. RESULT

The Patient Appointment & Scheduling Management application was successfully designed and developed using Zoho Creator, demonstrating the correct usage of all thirteen Basic Fields, field-level validation, sectioned form layout, an automated confirmation email workflow, and a consolidated appointment report.
