ASSIGNMENT : PAGE

Patient Appointment Command Center — Page Elements Use Case (Lab Record)

1. Objective

To design and build a single internal "Command Center" Page in Zoho Creator for the existing "Patient Appointment Booking" application, demonstrating the correct usage of all eleven Page Builder elements — Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets, and Viewer — so that the clinic's front desk and doctors have one unified workspace to monitor, manage, and act on appointment data.

2. Problem Statement

The clinic's front desk currently checks appointment status through the default form report, but this gives no quick visual sense of how full today's doctor schedules are, no easy way to search for a specific patient's appointment during a busy walk-in rush, no drag-and-drop way to move patients through the visit stages, and no single place to review a patient's previous lab reports. Staff waste time switching between the report, the physical token register, and shared folders just to serve a single patient.

A single internal Page is therefore built in Zoho Creator that acts as the front desk's command center for clinic operations, combining live data, quick actions, and reference material using every Page Builder element, so that staff can monitor and manage the entire patient visit lifecycle from one screen.

3. Scope of the Use Case

- Application Name: Patient Appointment & Scheduling Management
- Page Name: Clinic_Command_Center_Page
- Primary Users: Front Desk Staff, Doctors, Clinic Administrator
- Underlying Form/Report: Appointment_Booking_Form, Appointment_Booking_Report, Department_Load_Chart
- Objective of the Page: Provide a single internal workspace that combines monitoring, searching, processing, and reference material for patient appointments

4. Application Structure Used

The application contains the sections shown in its navigation menu: **Dashboard**, **Appointment Booking**, **Departments**, **Summaries**, **Doctor Profiles**, **Payment Records** and **Patient Profiles**. The data in these sections (departments with head and on-call doctor, doctor availability, payment records with retry count and transaction ID, and patient profiles) feeds the elements of the Command Center page.

5. Page Elements Used and Their Mapping

The table below maps every Page Builder element available in Zoho Creator to its role on the Clinic_Command_Center_Page.

Page Element	Element Name	Purpose	Placement on Page
Panel	Command_Center_Main_Panel	Acts as the primary structural container that groups all other elements into one cohesive dashboard	Wraps the entire page as the outer layout container
Board	Appointment_Status_Board	Provides a Kanban-style board so front-desk staff can drag appointments between visit stages	Central column: Requested, Confirmed, Checked-In, Consulted, Cancelled
Chart	Department_Load_Chart_Widget	Visualizes live appointment counts per department as a bar chart	Top-right area, next to the Gauge
Gauge	Daily_Patient_Target_Gauge	Displays today's patient footfall progress against the clinic's typical daily capacity as a circular gauge	Top-left area, first element the front-desk supervisor sees
Search	Patient_Search_Bar	Lets staff instantly look up a patient's appointment by name, phone number, or appointment ID	Fixed at the top of the page, above the Board
Form	Quick_Walkin_Appointment_Form	Embeds the Appointment_Booking_Form so staff can register a walk-in patient directly from the command center	Right-hand panel, accessible via a tab or expandable section
Report	Full_Appointments_Report	Embeds the complete Appointment_Booking_Report for detailed row-level review and export	Lower section of the page, below the Board
Snippets	Clinic_Guidelines_Snippet	Reuses a pre-built snippet (clinic guidelines and pre-consultation instructions) shared across the appointment form, this page, and confirmation SMS	Sidebar, as quick-reference text for staff
Button	Send_Appointment_Reminder_Button	One-click action to trigger reminder messages to patients with appointments scheduled for today	Directly above the Status Board, near the Confirmed column
Widgets	DoctorAvailability_And_Queue_Widgets	Displays supporting widgets — live doctor availability and current waiting-queue status — for staff coordination	Bottom strip, below the Full Appointments Report
Viewer	Medical_Report_Viewer	Embeds an inline document viewer so staff and doctors can open a patient's previous medical or lab report without leaving the page	Sidebar, below the Clinic Guidelines Snippet

6. Page Layout (Section-wise)

Section	Elements	Location
Section 1 — Overview Strip	Daily Patient Target Gauge, Department Load Chart Widget, Patient Search Bar	Top of the page
Section 2 — Processing Workspace	Send Appointment Reminder Button, Appointment Status Board	Centre
Section 3 — Detailed Data	Full Appointments Report	Below the Board
Section 4 — Reference & Quick Actions	Clinic Guidelines Snippet, Medical Report Viewer, Quick Walk-in Appointment Form (expandable tab)	Sidebar
Section 5 — Operations Strip	Doctor Availability and Queue Widgets	Bottom strip

All sections are laid out within the Command_Center_Main_Panel, which serves as the single structural Panel wrapping the full page.

7. Element-wise Configuration

7.1 Command_Center_Main_Panel (Panel)

Element	Placement	Access rule
Panel	Outer container of the whole page	Visible only to front-desk and clinical-staff roles

The Panel is the primary structural container. All other elements are dropped inside it so the page behaves as one cohesive dashboard.

Steps: Open Page Builder → create page Clinic_Command_Center_Page → drag the Panel element onto the canvas → name it Command_Center_Main_Panel → set role-based visibility for front-desk and clinical-staff accounts → place all other elements inside it.

7.2 Daily_Patient_Target_Gauge (Gauge)

Element	Placement	Configuration
Gauge	Top-left, Section 1	Daily capacity configurable per clinic; colour changes green → red near full capacity

Shows today's patient footfall against the clinic's typical daily capacity as a circular gauge, so the supervisor sees load at a glance.

Steps: Drag the Gauge element → data source: Appointment_Booking_Report → value: count of today's appointments → target: daily capacity → define colour ranges (green, amber, red).

7.3 Department_Load_Chart_Widget (Chart)

Element	Placement	Configuration
Chart (bar)	Top-right, next to the Gauge	Auto-refresh at a fixed interval

Visualizes live appointment counts per department as a bar chart so the supervisor always sees current departmental load without reloading.

Steps: Drag the Chart element → source: Appointment_Booking_Report → X-axis: Department, Y-axis: count of appointments → chart type: Bar → enable auto-refresh interval.

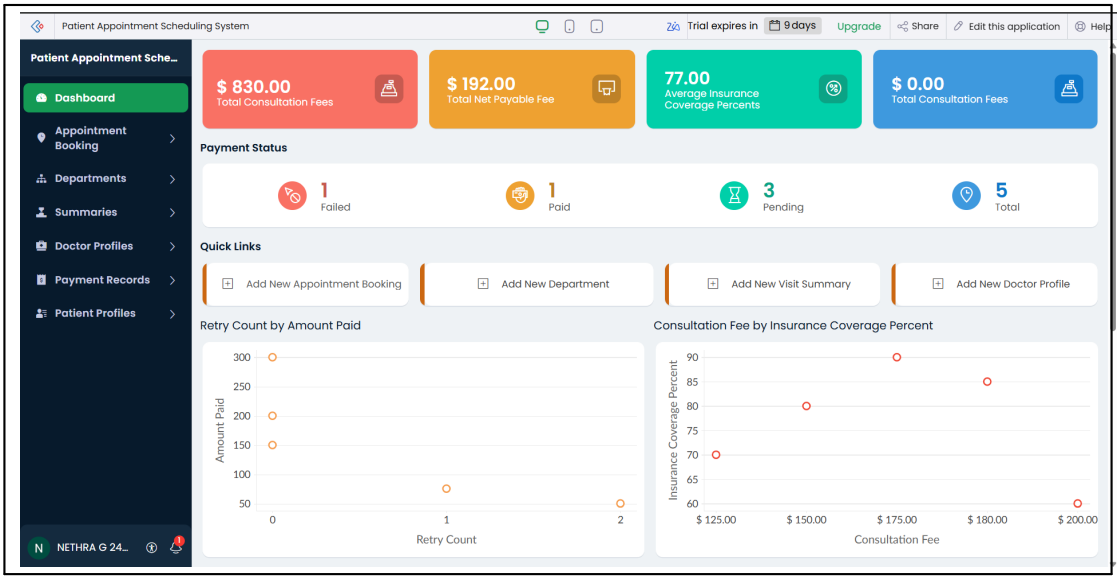

Fig. 1: Application Dashboard with total-fee summary tiles, Payment Status counts and charts (Retry Count by Amount Paid, Consultation Fee by Insurance Coverage Percent)

7.4 Patient_Search_Bar (Search)

Element	Placement	Searches across
Search	Top of page, above the Board	Patient Name, Contact Number, Appointment ID

Lets staff instantly look up a specific patient's appointment instead of scrolling through the full report during a busy walk-in rush.

Steps: Drag the Search element → connect to Appointment_Booking_Report → select the fields Patient Name, Contact Number and Appointment ID so all are searched together.

7.5 Appointment_Status_Board (Board)

Element	Placement	Configuration
Board (Kanban)	Central column, Section 2	Columns: Requested, Confirmed, Checked-In, Consulted, Cancelled — each mapped to a Status value

A Kanban-style board where staff drag appointment cards between visit stages. Dragging a card to another column updates the Status of the underlying record instantly.

Steps: Drag the Board element → source: Appointment_Booking_Report → group by field: Status → map each column to a Status value → choose the fields shown on each card (patient, doctor, time).

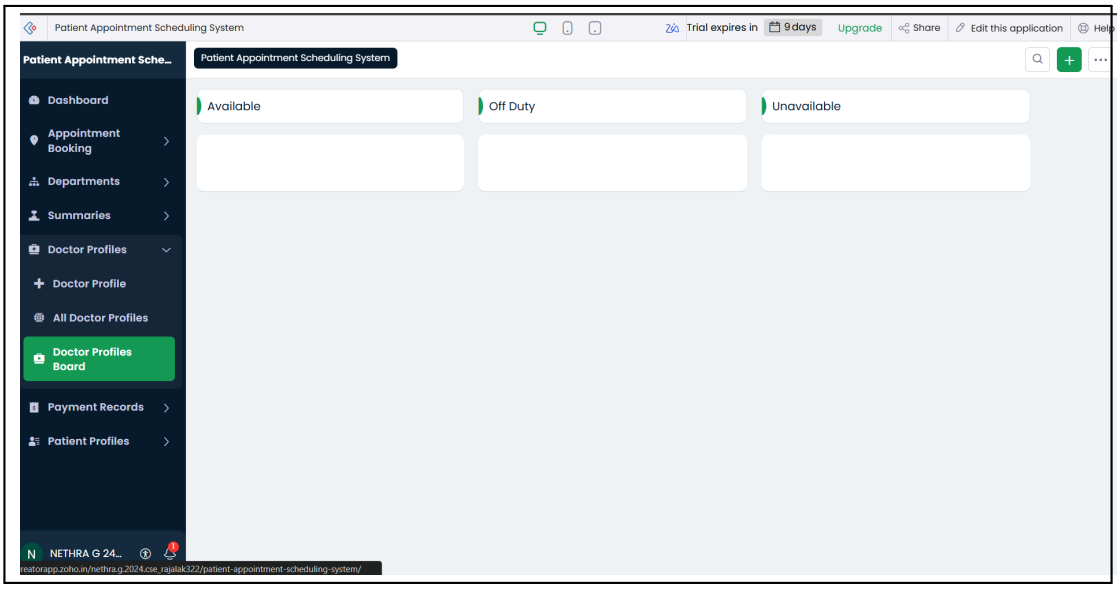

Fig. 2: Board view in the application (Doctor Profiles Board) with columns Available, Off Duty and Unavailable, built with the same Board element

7.6 Send_Appointment_Reminder_Button (Button)

Element	Placement	Rule
Button	Directly above the Status Board, near the Confirmed column	Messages only patients whose Preferred Appointment Date is today

A one-click action that triggers reminder messages to every patient with an appointment scheduled for today.

Steps: Drag the Button element → label: Send Appointment Reminder → On click: run the reminder workflow, filtered to today's date so future-dated appointments are never messaged.

7.7 Quick_Walkin_Appointment_Form (Form)

Element	Placement	Rule
Form	Right-hand panel, expandable tab	Same validation rules as Appointment_Booking_Form

Embeds the Appointment_Booking_Form so staff can register a walk-in patient directly from the command center, without opening a separate page.

Steps: Drag the Form element → select Appointment_Booking_Form → place it in a tab/expandable section of the sidebar → keep the standard validations so data stays consistent from every entry point.

7.8 Full_Appointments_Report (Report)

Element	Placement	Rule
Report	Lower section, below the Board	Export to Excel restricted to clinic-administrator accounts

Embeds the complete Appointment_Booking_Report for detailed row-level review. Related application reports, such as Departments, Payment Records and Patient Profiles, supply the supporting

data.

Steps: Drag the Report element → select Appointment_Booking_Report → enable the Export option and restrict it to administrator-level roles.

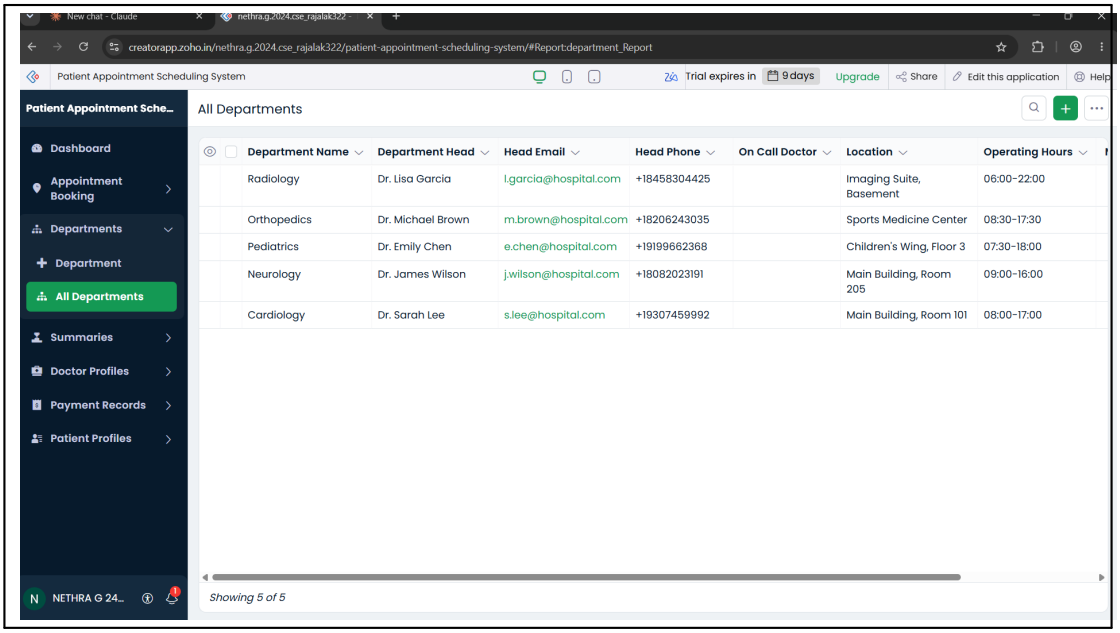

Fig. 3: All Departments report (department head, on-call doctor, location, operating hours)

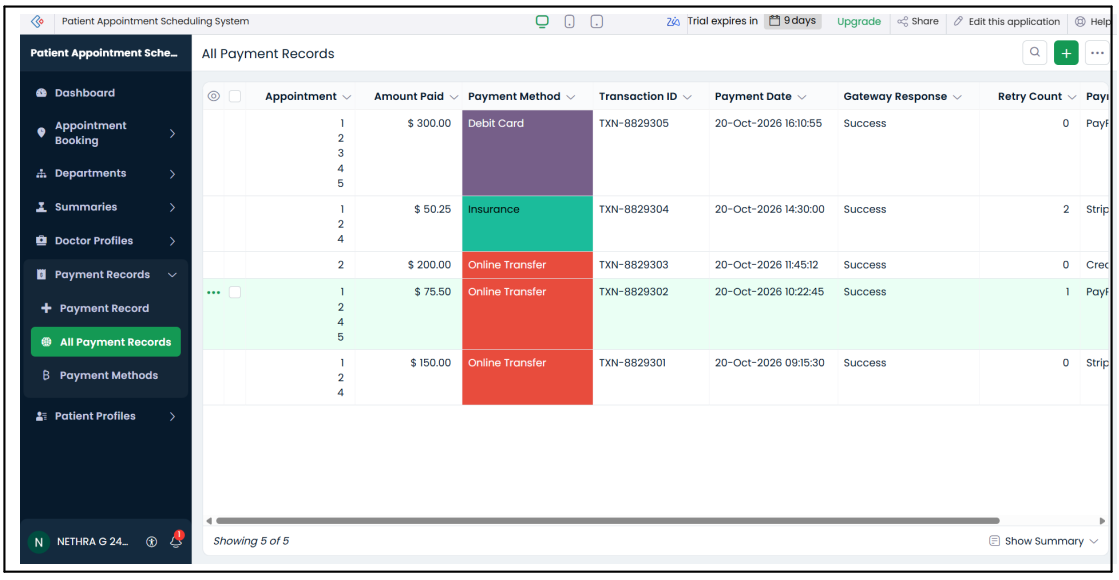

Fig. 4: All Payment Records report (amount paid, payment method, transaction ID, gateway response, retry count)

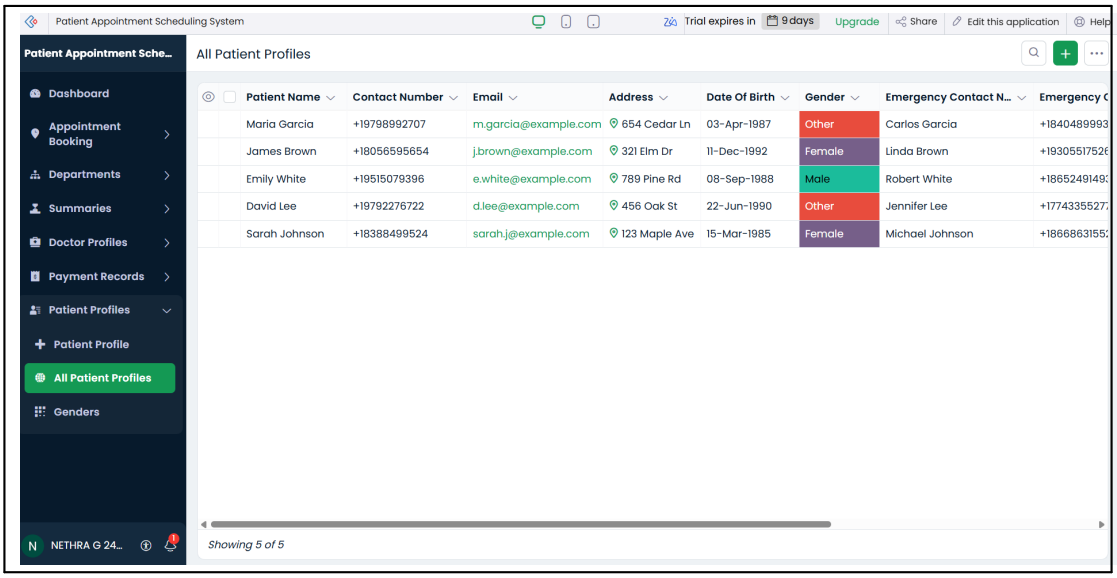

Fig. 5: All Patient Profiles report (patient name, contact number, email, address, date of birth, gender)

7.9 Clinic_Guidelines_Snippet (Snippets)

Element	Placement	Rule
Snippet	Sidebar	Centrally managed; edits reflect everywhere it is reused

Reuses one pre-built content snippet (clinic guidelines and pre-consultation instructions) across the appointment form, this page and the confirmation SMS, keeping the text consistent.

Steps: Create the snippet once → on the page drag the Snippets element into the sidebar → select Clinic_Guidelines_Snippet.

7.10 DoctorAvailability_And_Queue_Widgets (Widgets)

Element	Placement	Rule
Widgets	Bottom strip, below the Full Appointments Report	Availability refreshes in real time; queue pulls the current token / checked-in count

Shows a small gallery of supporting widgets — live doctor availability and the current waiting-queue status — for staff coordination.

Steps: Drag the Widgets element → add the Doctor Availability widget (source: Doctor Profiles status) and the Queue Status widget (source: Checked-In appointments) → arrange them in the bottom strip.

7.11 Medical_Report_Viewer (Viewer)

Element	Placement	Rule
Viewer	Sidebar, below the Clinic Guidelines Snippet	Always displays the latest uploaded report

An inline document viewer so staff and doctors can open a patient's previous medical or lab report without leaving the page.

Steps: Drag the Viewer element → bind it to the file-upload field of the patient's record → configure it to show the latest uploaded file so no manual link update is needed.

8. Configuration & Access Rules

Element	Rule configured
Panel	Role-based visibility: only front-desk and clinical-staff accounts can access the page
Board	Each column mapped to a Status value; dragging a card updates the record instantly
Chart	Auto-refresh at a fixed interval
Gauge	Daily capacity configurable; colour changes from green to red near full capacity
Search	Searches Patient Name, Contact Number and Appointment ID simultaneously
Form	Same validation rules as the standard Appointment_Booking_Form
Report	Export to Excel restricted to clinic-administrator accounts
Snippets	Centrally managed; edits reflect wherever the snippet is reused
Button	Messages only patients whose Preferred Appointment Date is today
Widgets	Doctor availability in real time; queue status from the current checked-in count
Viewer	Displays the latest uploaded report without manual link updates

9. Workflow Summary

- **Step 1:** Front-desk staff open Clinic_Command_Center_Page and see the Daily Patient Target Gauge and Department Load Chart for a quick status check.
- **Step 2:** To find a specific patient, they use the Patient Search Bar instead of scrolling through the full report.
- **Step 3:** As patients check in and are consulted, staff drag appointment cards across the Appointment Status Board.
- **Step 4:** For patients with appointments today, staff click the Send Appointment Reminder Button to send bulk reminders.
- **Step 5:** For a walk-in patient, staff use the Quick Walk-in Appointment Form directly from the command center.
- **Step 6:** For deeper analysis or export, the clinic administrator scrolls to the Full Appointments Report.
- **Step 7:** Before a consultation, the doctor refers to the Clinic Guidelines Snippet, checks the Queue Status Widget, and opens the Medical Report Viewer to review previous reports.

10. Learning Outcomes Achieved

- Understood the purpose and correct use case of each Page Builder element in Zoho Creator.
- Learned how to combine Forms and Reports with visual monitoring elements (Chart, Gauge, Board) into one operational dashboard.
- Used Search to make large patient datasets quickly navigable for front-desk staff.

- Understood how Snippets support content reuse and consistency across pages and forms.
- Learned how Widgets and Viewer elements extend a page with supporting media and reference documents.

Result: The Clinic_Command_Center_Page was designed using all eleven Page Builder elements, giving the clinic one unified workspace to monitor, manage and act on patient appointment data.
