Assignment - 08

Patient Appointment Reports Suite — Report Types Use Case

1. Objective

To design and build a complete suite of Reports in Zoho Creator for the existing "Patient Appointment Booking Form" application, demonstrating the correct usage of all nine Report Types available in Zoho Creator — List View, Spreadsheet View, Kanban View, Calendar View, Map View, Timeline View, Pivot Table, Chart View, and Summary View — so that the clinic's front desk and management can view, analyze, and act on appointment data from multiple perspectives.

2. Problem Statement

The Patient Appointment Booking Form captures rich patient and scheduling data, but a single default list of records cannot serve every stakeholder's needs. The front desk needs a quick way to update check-in and consultation status in bulk, doctors need to see how many patients are scheduled on a given day, the clinic administrator needs to see where patients are traveling from for outreach camp planning, and management needs summarized department-load and trend charts to plan staffing and doctor rosters.

Design a complete set of Reports on top of the Appointment_Booking_Form in Zoho Creator, using every Report Type Zoho Creator provides, so that each stakeholder group has a purpose-built view suited to how they need to consume the appointment data.

3. Scope of the Use Case

- Application Name: Patient Appointment & Scheduling Management
- Base Form: Appointment_Booking_Form
- Primary Users: Front Desk, Doctors, Clinic Administrator, Management
- Deliverable: Nine purpose-built Reports, one for each Zoho Creator Report Type
- Objective of the Reports Suite: Give every stakeholder a report format best suited to their specific decision-making need

4. Report Types Used and Their Mapping

The table below maps every Report Type available in Zoho Creator to a specific report built on the Appointment_Booking_Form.

Report Type	Report Name	Purpose	Key Configuration
List View	All_Appointments_List	Provides a simple, scrollable list of every appointment with key columns for quick browsing and search	Columns: Patient Name, Department, Gender, Preferred Appointment Date, Appointment Status; sorted by Preferred Appointment Date (ascending)

Report Type	Report Name	Purpose	Key Configuration
Spreadsheet View	Appointments_Spreadsheet	Provides an editable, grid-style view for the front desk to bulk-update check-in and consultation status	Inline-editable columns: Check-In Status, Consultation Status, Payment Status; grouped by Department
Kanban View	Appointment_Status_Kanban	Displays appointments as draggable cards grouped by processing stage, so staff can visually track progress	Grouped by Status field: Requested / Confirmed / Checked-In / Consulted / Cancelled; card shows Patient Name and Department
Calendar View	Appointment_Schedule_Calendar	Displays appointments on a calendar based on the preferred appointment date, to help doctors plan their daily patient load	Based on Preferred_Appointment_Date; each day cell shows the count of appointments and department breakdown
Map View	Patient_Residential_Map	Plots patients' residential addresses on a map, to help the clinic administrator plan outreach health camps in underserved areas	Based on Residential_Address (geocoded); pins colored by Department
Timeline View	Appointment_Activity_Timeline	Displays appointment requests along a time axis, to help management track patient inflow trends across the month	Based on Appointment_Submitted_On; grouped by week, showing cumulative appointment requests
Pivot Table	Department_By_Gender_Pivot	Cross-tabulates Department against Gender to show the patient demographic mix served by each department	Rows: Department; Columns: Gender; Values: Count of Appointments
Chart View	Department_Load_Chart	Visualizes the number of appointments per department as a bar chart, to help balance doctor workload across departments	Chart type: Bar Chart; X-axis: Department; Y-axis: Count of Appointments

Report Type	Report Name	Purpose	Key Configuration
Summary View	Doctor_Wise_Summary	Groups and summarizes appointments by assigned doctor, showing patient count per doctor for workload balancing	Grouped by Doctor_Availability_Lookup; Summary column: Count of Appointments

5. Report Configuration Details (Report-wise)

All_Appointments_List (List View)

- Default landing report for the front desk, showing every appointment in a flat, searchable list.
- Includes a search bar and column-level filters for Department, Gender, and Appointment Status.

Appointments_Spreadsheet (Spreadsheet View)

- Used daily by the front desk to update check-in, consultation, and payment status in bulk.
- Only Check-In Status, Consultation Status, and Payment Status columns are editable; all other columns are read-only.

Appointment_Status_Kanban (Kanban View)

- Used by the front desk to visually track how appointments move from Requested to Consulted or Cancelled.
- Staff drag an appointment's card across columns as its status changes, updating the underlying Status field automatically.

Appointment_Schedule_Calendar (Calendar View)

- Used by doctors and the front desk to see how many patients are scheduled on a given day.
- Clicking a date drills down into the list of patients scheduled for that day.

Patient_Residential_Map (Map View)

- Used by the clinic administrator to identify geographic clusters of patients for outreach health camp planning.
- Helps decide which neighborhoods would benefit most from a mobile health camp.

Appointment_Activity_Timeline (Timeline View)

- Used by management to monitor patient inflow trends across weeks and months.
- Helps forecast staffing needs for the front desk and nursing team during high-demand periods.

Department_By_Gender_Pivot (Pivot Table)

- Used by management to understand the demographic mix of patients visiting each department.
- Supports decisions on department-specific outreach and awareness campaigns.

Department_Load_Chart (Chart View)

- Used in weekly review meetings to visually compare patient load across departments.
- Directly informs decisions on doctor roster allocation and department staffing.

Doctor_Wise_Summary (Summary View)

- Used by management to ensure patient load is balanced fairly across doctors.
- Summary totals feed directly into decisions on hiring additional doctors for high-demand departments.

6. Validation & Configuration Rules

- List View (All_Appointments_List): default sort by Preferred Appointment Date, ascending, so the nearest appointments appear first.
- Spreadsheet View (Appointments_Spreadsheet): edit permissions restricted to the Front Desk role; all other fields locked.
- Kanban View (Appointment_Status_Kanban): card movement between columns triggers an automatic update to the Status field with a timestamp.
- Calendar View (Appointment_Schedule_Calendar): only the current and next day's appointments are highlighted for operational focus.
- Map View (Patient_Residential_Map): requires the Residential Address field to be geocode-enabled for accurate pin placement.
- Timeline View (Appointment_Activity_Timeline): data refreshes daily to reflect the latest appointment trend.
- Pivot Table (Department_By_Gender_Pivot): blank cells are displayed as zero rather than being left empty, to avoid ambiguity.
- Chart View (Department_Load_Chart): chart is set to auto-refresh whenever a new appointment is submitted.
- Summary View (Doctor_Wise_Summary): appointments without an assigned doctor are grouped under an "Unassigned" category rather than being excluded.

7. Workflow Summary

- Step 1: Patients submit appointment requests through the Appointment_Booking_Form as covered in the base use case.
- Step 2: The front desk monitors incoming requests using the All_Appointments_List and the Appointment_Activity_Timeline.
- Step 3: As confirmations and check-ins happen, staff track progress visually using the Appointment_Status_Kanban.
- Step 4: Doctors use the Appointment_Schedule_Calendar to plan their daily patient load.
- Step 5: The clinic administrator uses the Patient_Residential_Map and Doctor_Wise_Summary to plan outreach camps and balance doctor workload.

- Step 6: Management reviews the Department_By_Gender_Pivot and Department_Load_Chart in weekly meetings to adjust staffing and awareness campaigns.
- Step 7: On a daily basis, the front desk uses the Appointments_Spreadsheet to record check-in, consultation, and payment status in bulk.

8. Expected Learning Outcomes

- Understand the purpose and correct use case for each Report Type in Zoho Creator.
- Learn how to choose the right report type based on the stakeholder's decision-making need rather than default to a single list view.
- Practice configuring grouping, sorting, and summary logic across different report types on the same underlying form.
- Understand how visual reports (Kanban, Calendar, Map, Chart, Timeline) support faster operational decisions than raw tabular data.
- Understand how Pivot Tables and Summary Views support planning and resource-allocation decisions.

9. Deliverable for This Lab Exercise

Students must build all nine reports on the existing Appointment_Booking_Form in Zoho Creator exactly as specified above, configure the listed grouping and validation rules, and submit a screenshot-based lab record showing: (a) each of the nine reports in its configured state with sample data, (b) the report type selector in Zoho Creator's Report Builder for each report, and (c) at least one drill-down or interaction (e.g., clicking a calendar date or dragging a Kanban card) demonstrated with before/after screenshots.
